BSL Gas Technologies Limited

Mixing Knowledge and Resource Delivering Thought Provoking Industrial Gas Solutions

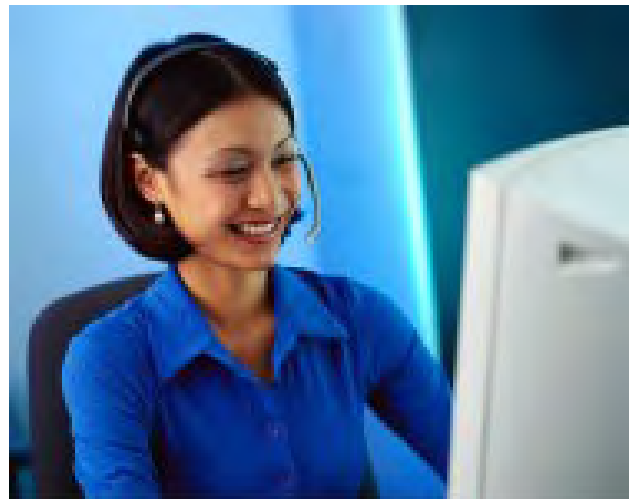

Research & Development Innovation in Design

Research and Development is a facility that many large institutions lack. BSL Gas Technologies Limited has invested heavily in personnel, training qualifications and computer aided design facilities.

Our staff and our facilities are regularly made available to our "blue chip" clientele to undertake project design studies related to mixed gas and Nitrogen generation applications.

Our facilities includes "Solidworks" a computer aided design package with 3D monitoring and rendering applications, Autocad, SAGE with full Bill of Materials applications and Job Costing.
